zix®

Get more value out of your system with a Microsoft 365 Security Audit.

It detects vulnerabilities and, in some cases, instantly remediates them.

Advantages:

- Unparalleled insight into Microsoft 365 environment and security deficiencies
- Continuous monitoring of compromised email account activity
- Strong password and authentication policy analysis and recommendations
- Immediate threat mitigation such as user deactivation
- Recommended remediation steps and justification
- Intuitive severity classifications
- Enforces principles of least privilege
- Policy management recommendations
- Available on any Microsoft 365 tenant
- Simple, recurring report scheduling
- Export information in multiple formats
- Phenomenal Care support

Benefits:

- Enhances security posture by mitigating the threat of email account compromise
- Empowers administrators to focus on true threats and reduce false positives
- Simple to manage and support with Secure Cloud

Don't sacrifice security in the pursuit of greater productivity.

Zix's Microsoft 365 Security Audit continuously analyzes your mailbox settings to identify vulnerabilities and determine whether an email account may be compromised. That includes unauthorized mailbox forwarding rules, excessive administrator permissions, and more. Further, it can mitigate or remediate most issues without administrator intervention.

Why now?

The Microsoft 365 Security Audit is specifically designed to shield your business from business email compromise (BEC)—one of the fastest growing threats businesses face today. The audit assesses key configurations of Microsoft tenants and provides clear indicators for remediation. It also provides granular information that is difficult and time consuming to obtain in the Microsoft portal, but is invaluable for administrators. Plus, as an integral part of Secure Cloud, the Microsoft 365 Security Audit works seamlessly with other security, compliance, and productivity services in our Secure Suite, resulting in a fully-integrated and optimized platform that allows our partners and customers to unlock greater opportunities with a secure, modern workplace.

The Security Audit checks your admins, users, mailboxes, and rules on your Microsoft 365 tenant for vulnerabilities so you can resolve unidentified issues before they become crises.

Continuous monitoring and proactive remediation of compromised Microsoft 365 email accounts

The audit analyzes mailboxes for:

- Mailbox permissions
- Inactive mailboxes
- Forwarding settings
- Inbox rules

- Passwords
- Multi-factor authentication
- Audit scheduling
- Optimization

The audit provides remediation guidance. Plus, our longstanding relationship with Microsoft gives us unique insights into announcements and product changes.

The audit is available in Secure Cloud for Partners. Direct customers should contact Sales for more information.
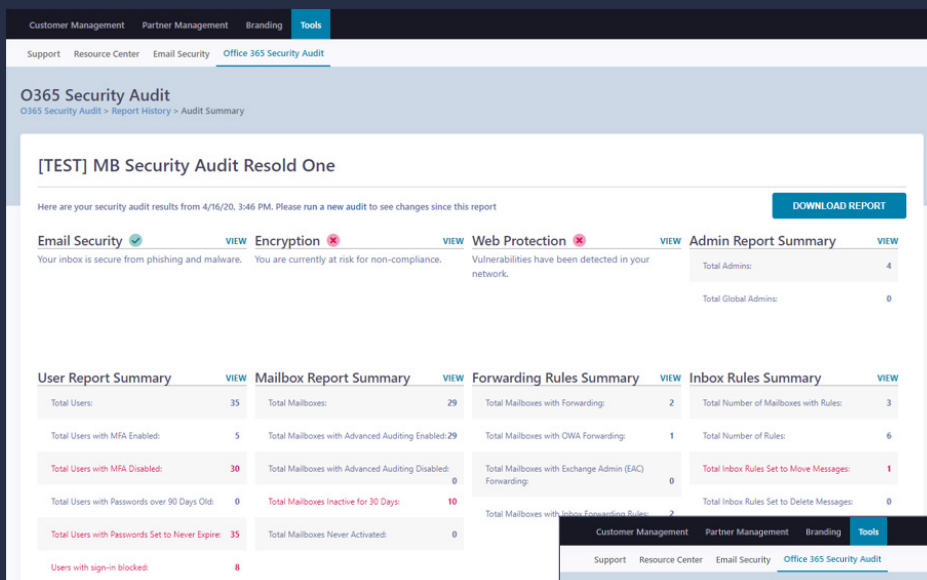

Provides granular security awareness

Conveniently schedule routine audits

Easily configured and managed in Secure Cloud

Tailored for your domain and/or tenant
